Electricity consumption meter system - with recorded data output in coded form

 BROWN BOVERI CO AG 21.12.73-DT-363805
 R31 (26.06.75) G03c-19

Each consumer is provided with a meter for recording the number of units of electricity which have been used, and which responds to a signal transmitted to a radio receiver adjacent the meter, to transfer the meter reading in coded form to a card which is sent to a central station. The radio receiver (2) pref. responds to control signals in the audio frequency range, transmitted to the receiver (2) by a transmitter (3) at the central station, via the supply network, and provides a control signal for the meter (1), causing the coded data to be printed by the latter onto an inserted card e.g. with a magnetic or photosensitive layer for receiving the data. 21.12.73. as 363805 (8pp).
